TETRIIS.

MASTERTRONZC

Introduction

After getting that addictive, boring, jittery feel starting level of addiction. The higher the number, the greater the rewards, but the harder the fall.

Playing Tetris

A variety of differently shaped blocks fall one by one from the top of the window in playfield. You can maneuver the falling shapes through and rotate them before they land in the bottom of the playfield.

The idea is to create complete horizontal rows of pieces within the playfield. When one of these patterns has been completed it disappears and ten blocks above fall into the next vacant row.

Winning

Your aim is to (while at risk) complete lines as possible. If you have gaps, the playfield will fill up rapidly leaving you less room to maneuver. Should the pile of blocks reach the top of the screen, the game ends.

The shape key displays the shape of the block that will fall after the current block has landed. Use it for formulating your (current) strategy. The rate at which the blocks fall speeds up exponentially as your score increases.
